

**07/16/2021 - Ancillary Procedure in UCHealth Radiology - Cherry Creek****Imaging****Imaging****MR BRAIN W/WO CONTRAST (Final result)****MR BRAIN W/WO CONTRAST**

Resulted: 07/16/21 1121, Result status: Final result

Order status: Completed

Filed by: Edi, Rad Results In 07/16/21 1123

Accession number: 19079624

Narrative:

EXAMINATION:

MRI brain without IV contrast

MRI brain with IV contrast

Resulted by: Nyberg, Eric Mackenzie, MD

Performed: 07/16/21 0921 - 07/16/21 0954

Resulting lab: POWERSCRIBE

HISTORY: Concern for abnormality in the clivus

COMPARISON: CT from outside facility performed 2/24/2021

TECHNIQUE: Multi-planar, multi-sequence brain MRI was performed before and after IV gadolinium.

CONTRAST: 14 mL of IV Multihance

**FINDINGS:**

Brain: Ventricles and sulci are grossly symmetric and within normal limits for age.

There is no significant parenchymal signal abnormality.

No evidence of space occupying mass or edema.

No abnormal parenchymal or meningeal enhancement.

Sagittal midline structures: Normal.

Acute ischemic changes: None.

Hemorrhage: None.

Extra-axial: None.

Calvarium/scalp: Negative.

Skull base: Negative.

Visualized sinuses/orbits: Negative.

Visualized upper neck: Negative.

**Impression:**

IMPRESSION: Unremarkable MRI of the brain. No worrisome skull base lesion.

Report E-Signed By: ERIC NYBERG at 7/16/2021 11:21 AM
