

Patient Name: ASHBURN, TRENTON  
Date of Service: 27-Oct-2021 11:22:00 AM  
MRN: 8552  
Date of Birth: 04-29-1978      Gender: M  
Referring Physician: EDWARD HEPWORTH, MD

---

**EXAM: MRI THORACIC SPINE WO: WEIGHT BEARING**

**HISTORY:** History of total ethmoidectomy, right ethmoid CSF leak & reapi in 7/21, multiple cycling crashes in last 10 years. Patient c/o headaches, head pressure, base of skull pain, neck pain and tinnitus for approximately 2 years. Evaluating for further spinal leaks.

Comparison: None

Technique: Axial and sagittal T1 and T2 sequences were obtained.

**Findings:**

The skeletal structures are of normal signal intensity and appearance. The vertebral body heights are well maintained. The alignment of the thoracic spine is normal. The paravertebral soft tissues are normal. There is no edema in the skeletal structures or soft tissues. The intervertebral discs are normal. There are no disc protrusions or disc bulges. There is no evidence of spinal stenosis. The neural foramina and nerve roots are normal. The spinal cord is of normal size and signal intensity.

**Impression:**

Normal MRI of the thoracic spine.
